INVESTIGATIONS***

***EMERGENCY OR SPECIAL
INVESTIGATIONS***

FIELD'S POINT

EMERGENCY OR SPECIAL INVESTIGATIONS - FIELD'S POINT:

- 01/28/11 Pretreatment staff responded to a report from ESTA staff of an unusual odor on the second floor of the NBC Corporate Office Building. Unusual odors were not detected in the area of the complaint at the time of the inspection. The PID and four-gas meters were used and unusual levels of pollutants were not detected. It was noted an unusual odor was detected outside of the building
- 02/04/11 Pretreatment staff responded to a report from DEM stating a business located on Mineral Spring Avenue in North Providence that had been getting sewer odors inside its facility over a long period of time. Staff conducted a thorough inspection of the area. The majority of the area is residential. However, there were fourteen restaurants in this drainage area, four of which were not previously permitted. All the restaurants were inspected. None of the inspections revealed the companies were discharging excessive amounts of grease. Nine of the ten permitted restaurants were complying with the terms of their permits. The final permitted restaurant has not been complying with its permit. An Administrative Order has been issued to this restaurant. The four unpermitted restaurants have applied for permits.
- 02/07/2011 Pretreatment staff responded to a report from The Providence School Department stating that there had been a #2 fuel oil spill at the Harry Kizirian School located at 60 Camden Avenue in Providence. A leak from a faulty pressure gage resulted in approximately 50 gallons of #2 fuel oil being released and 10-15 gallons discharging to a floor drain. A company was contracted to clean the area, pump out the drain line and boiler equipment. The sewer system was not adversely impacted.
- 03/07/11 Pretreatment staff responded to a report from the EMDA staff of oil sheen on the Woonasquatucket River near the intersection of Rathbone and Promenade Streets in Providence. NBC Outfall 45, located at the intersection, was inspected and slight oil sheen appeared to be coming from the outfall. Storm drains upstream of Outfall 45 were inspected. A noticeable sheen on the road surface of Rathbone Street was observed near a catch basin, but no sheen was noticed in the catch basin. Additional catch basins on Rathbone Street were inspected and nothing unusual was detected. The oil sheen appeared to be the result of heavy rain washing residual oil on the street into the drainage system. In addition, NBC Outfall #44 was also inspected and nothing unusual was observed.
- 03/08/11 Pretreatment staff responded to a report from EMDA staff of an elevated LEL reading in a manhole on Humbert Street in North Providence upstream of Alpha Plating and Metallizing. It was determined that the elevated LEL level was localized to a manhole outside of Northeast Auto Body. An inspection of the facility found the firm performs only frame work and does not discharge any process wastestreams to the sewer system. National Grid was notified of the elevated LEL reading as there were markings on the street indicating a gas line next to the manhole. Pretreatment staff remained on scene until National Grid arrived at which point the investigation was concluded.

EMERGENCY OR SPECIAL INVESTIGATIONS - FIELD'S POINT (CONTINUED):

- 03/16/11 Pretreatment staff responded to a report of visible oil sheen in the rain water stream on Salem Street and discharging on to Potters Avenue in Providence. Upon investigation, the sheen was noted to be coming from a dumpster full of engines on the property of Aluminum & Copper Recycling Inc. located at 68 Salem Street. The owner of the facility was notified of the situation. Employees of the company applied absorbed material to the contaminated area of the property and around the dumpster.
- 03/30/11 Pretreatment staff responded to a report from EMDA staff that the LEL reading in a manhole located on Woonasquatucket Avenue in North Providence was elevated. A strong natural gas odor was detected when Pretreatment staff arrived at the location. National Grid was contacted. National Grid stated the natural gas could be leaking from joints in gas lines.
- 04/11/11 Pretreatment staff responded to a report from EMDA staff of an oily substance in the sewer line on DeSoto Street in Providence. The manholes between Grove Street and Helme Street on DeSoto Street were inspected and found to contain dark grit. There was no oil sheen or oil smell noticed when inspecting the manholes. An inspection of JC Gorham located on DeSoto Street was conducted and all was in order.
- 04/12/11 Pretreatment staff responded to a report from Rhode Island Hospital regarding a battery acid spill from a power pallet jack. A small amount of battery acid had entered a catch basin at the facility loading dock. The area had been bermed to prevent further acid from entering the catch basin. An environmental response firm was on site and had begun to clean the area. The catch basin was cleaned out at the time of the inspection. It was determined that the sewer was not adversely affected by the spill.
- 04/27/11 Pretreatment staff responded to a report from EMDA staff of an oily substance in the primary clarifiers at the Field's Point Plant. Upon inspections of the primaries oil drops were observed coming up to the surface. Pretreatment and Operations staff inspected the wastestreams that discharge to the primaries. Oil was not observed in the grit tanks, scum wells, aeration tanks, final clarifiers or junction boxes. A sample from Synagro was inspected and oil was not present. A representative from Synagro stated that the antifoam agent was oil based and he had washed all of his manhole covers. An inspection of the area behind the building and sheen was observed on a manhole cover. A follow up inspection of the primaries was conducted on April 28, 2011 and the oil was no longer present.

EMERGENCY OR SPECIAL INVESTIGATIONS - FIELD'S POINT (CONTINUED):

- 04/27/11 Pretreatment staff responded to a report from RI DEM stating that there was raw sewage being pumped out of a building into a parking area located at 103 Plainfield Street in Providence. Upon arrival, Pretreatment staff met with representatives of DEM, City of Providence Department of Public Works, and the building owner. The owner stated that he had been pumping the sewage out of the basement because of a plumbing issue. During the investigation, one non-permitted restaurant, a hair salon, a retail jewelry store and a café were inspected. A passive grease removal unit in the kitchen area of one restaurant was not being maintained properly. There were no other discharges other than from sanitary sources from the other three locations. The owner of the building was informed the waste in the parking area needed to be pumped out by a licensed waste hauler.

Upon arrival at the plant it was verified the influent was still coming in pink. It was stated that pink began coming in at approximately 5:30 p.m. The one known company with the potential to impact the plant with color, Eastern Color & Chemicals was contacted. Representatives from the company stated nothing unusual occurred at their facility that day and they had not processed red or pink. The grit chambers were reinspected at approximately 7:00 p.m. and the influent was normal in color. An inspection of Eastern Color was conducted on June 29, 2011. The company did not start operations prior to the inspection. The contents of the final discharge pit and pH tank were a beige color. There was no evidence of red, pink or purple wastewater at the facility. The Field's Point effluent sample for June 28, 2011 was inspected and it did not show any discoloration. ***EMERGENCY OR SPECIAL
INVESTIGATIONS***

BUCKLIN POINT

EMERGENCY OR SPECIAL INVESTIGATIONS - BUCKLIN POINT:

- 02/07/11 Pretreatment staff responded to a report from Interceptor Maintenance (IM) staff of grease build-up in a line at Lonsdale Avenue and Watson Street in Central Falls. The area upstream of the location was investigated. The majority of the area is residential. However, two restaurants are located in this drainage area, one unpermitted and one permitted. Both facilities were inspected. Nothing unusual was observed. The unpermitted restaurant was required to apply for and obtain a permit.
- 05/03/11 Pretreatment staff received a report of hydrogen sulfide odors from a resident of Cumberland who stated that strong odors had been detected for three weeks at Highland Corporate Park and Cintas. It was stated the caller lived at 13 Mendon Road approximately eight miles away from Highland Corporate Park. Pretreatment staff investigated the report. The atmosphere was tested at the Highland Corporate Park pump station and the manholes on Biltmore Avenue, Grand Avenue, and Sugar Pine Drive. The hydrogen sulfide level at each location was 0.0 ppm and no unusual odors were detected at any of the locations mentioned. Staff proceeded to drive to 13 Mendon Road. No odors were detected on the way there and the address did not exist. The report was unfounded.
- 06/15/11 Pretreatment staff responded to report stating grease laden wastewater from Royal Panda Restaurant in Cumberland was being discharged outside of the building. Upon arrival at the restaurant no visible grease was observed in the parking lot or in the street. An inspection of the facility revealed the automatic grease removal unit had become blocked and overflowed onto the floor of the kitchen. The grease removal unit was found to be inoperable and full of solidified grease. Based upon the inspection the facility was required to fully clean and service the grease removal unit.
- 07/27/11 Pretreatment staff responded to a report from EMDA staff regarding black color in the East Providence Interceptor (EPI) influent at the Bucklin Point Treatment Facility. The influent appeared to be slightly darker than normal. A sample was collected from the Omega Pump Station. The color of the sample at the pump station was normal in appearance. The source could not be determined.
- 08/11/11 Pretreatment staff responded to a report of odors on Grand Avenue in Cumberland. This location is downstream of Highland Corporate Park. Staff met a representative from the Town of Cumberland Sewer Department at the Highland Corporate Park pump station. There was no odor around the pump station. The atmosphere in the wet well was monitored using a four gas meter. There were no unusual odors in the wet well and the hydrogen sulfide concentration was 0.0 ppm. The manhole on Grand Avenue was then inspected. Once again there were no unusual odors in the sewer line or in the area surrounding the manhole. The hydrogen sulfide concentration was 0.0 ppm in the manhole. Periodically a natural gas odor could be detected. The representative from Cumberland stated that a truck had backed into a natural gas vent pipe just up the street from where the odors were reported.

EMERGENCY OR SPECIAL INVESTIGATIONS - BUCKLIN POINT (CONTINUED):

08/18/11 Pretreatment personnel responded to a report from Microfibres, Inc. that the firm had an accidental red pigment release overnight into its wastewater stream and ultimately into the sewer system. Upon arrival at the facility, the red pigment discharge had ceased. No evidence of the color discharge had reached the Bucklin Point Treatment Plant. .

09/06/11 - Pretreatment staff received a report from Bucklin Point Operations staff at
09/09/11 approximately 7:40 a.m. of thick oil impacting the treatment facility. It was stated the oil was entering the plant through the Blackstone Valley Interceptor (BVI). Staff was dispatched to Bucklin Point at approximately 8:15 am. An inspection of the plant and discussions with plant staff indicated that the oil was coating equipment such as the bar racks in the screening building. In addition, it was observed that due to heavy rain in the morning, the oil was accumulating in the wet weather tank. After the inspection of the plant, Pretreatment staff began to track the oil in BVI upstream of the plant. Manholes along BVI were inspected. The oil was tracked back to a manhole located upstream of the Seekonk Syphon. At that time, the oil was not observed in BVI upstream of this manhole or in any sewer line discharging to BVI upstream of the manhole.

At approximately 10:00 am on September 6, 2011, Pretreatment staff received a call from the Bucklin Point Superintendent requesting a boom be deployed in the wet weather tanks at the plant to prevent the oil from impacting wet weather discharges. Pretreatment staffed deployed a boom in the influent channel of the chlorine contact tank.

After the boom was deployed Pretreatment again attempted to track the oil in BVI. Again it was seen in the manhole upstream of the Seekonk Syphon, but could not be tracked further upstream.

On September 8, 2011, Pretreatment was contacted in the morning by the Bucklin Point Superintendent. He stated that he needed to get someone in to start getting the oil out of the wet weather tanks to prevent it from discharging to the Seekonk River. He also asked if Pretreatment staff could once again inspect the BVI influent since there had been heavy rains in the morning. Pretreatment staff was accompanied by the Assistant Environmental Monitoring Manager (AEM) on the inspection. The BVI influent did not appear to contain oil. However, the AEM inspected the suction tube on the BVI automatic sampler and stated that oil had accumulated on the tube. This indicated that oil was still coming into the plant.

EMERGENCY OR SPECIAL INVESTIGATIONS - BUCKLIN POINT (CONTINUED):

09/06/11 - In the afternoon of September 8, 2011, Pretreatment staff began to track the
09/09/11 oil in BVI starting with a manhole located on Water Street in Pawtucket. The
(cont'd) oil continued to be observed in BVI through Pawtucket, Central Falls, and
Cumberland. The industrial park discharging to the beginning of BVI located
in Cumberland on Industrial Road was investigated. The sewer lines on
Industrial Road were inspected and oil was not present. There is a sanitary
sewer line located in a driveway located next to 5 Industrial Road. Oil was
not observed in the first two manholes on this line. However, oil was
observed in the last manhole on this line as well as the next manhole located
on a line parallel to Rte. 295. The manhole located between the last manhole
where oil was not seen and the manhole where the oil was observed was
inspected. A connection coming from 5 Industrial Road could be seen and oil
was dripping from the connection and accumulating under the connection.
The oil could be seen breaking away and entering the flow in the sewer line.
Rhode Island Novelty, Inc. is located at 5 Industrial Road. This company
uses #6 fuel oil to heat its facility. It is permitted to discharge boiler blow
down to the NBC sewer system.

Pretreatment staff inspected Rhode Island Novelty. Upon entering the
facility, staff met with Mr. James Connor and other personnel. Mr. Connor
was informed of the situation. He immediately contacted the person who
operated the facility boilers. Once the boiler operator arrived at the facility,
an inspection of the boiler room was performed. The boilers were opened and
in the process of being prepared for the heating season. It was stated that the
#6 oil was being circulated in the tank to keep it flowing. Mr. Connor and the
other Rhode Island Novelty staff were shown the discharge coming from a
connection from their facility. An absorbent pad was dropped into the flow
immediately under the Rhode Island Novelty connection. When this pad was
retrieved it was coated with oil. This pad was retained. At this time, the
preheater recirculation pumps were shut off at the facility to prevent any more
oil from entering the sewer. The firm was also required to investigate the
source of the oil.

On September 9, 2011, Mr. Bogdan Nowak, the president of Rhode Island
Novelty was contacted by Pretreatment staff to ensure he was aware of the
situation. He stated that the #6 oil was coming from a ruptured pipe in the
facility and has since been repaired. During an inspection conducted on the
afternoon of September 9, 2011, it was stated that an abandoned steam
condensate was still connected to the sewer system and the ruptured oil line
leaked oil into the steam condensate line. It was verified that the ruptured
pipe was repaired. The manhole was again inspected and the oil had stopped
being discharged.

EMERGENCY OR SPECIAL INVESTIGATIONS - BUCKLIN POINT (CONTINUED):

- 10/04/11 Pretreatment staff responded to a report from IM staff of a white and coffee color in a regulator manhole on the corners of Exchange Street and Exchange Court in Pawtucket. Workers in a nearby building who were conducting renovations were asked if any painting was occurring. Painting had occurred however not the colors in question. The manhole was opened and nothing unusual was observed.
- 11/6/11 Pretreatment staff received a report at 6:45 pm stating the influent at Bucklin Point was red starting at 4:45 pm. During the report it was stated the red has ceased entering the plant. Pretreatment staff contacted the companies that had the potential to impact the plant. The companies were required to submit their color logs for November 6, 2011. After reviewing the logs a potential source for the color could not be determined.
- 11/30/11 Pretreatment staff received a call from the Town of Cumberland Sewer Department stating a company located in Highland Corporate Park was periodically experiencing odor outside of its building. It was stated that he has smelled the odors in the past and they seemed to be from sewage and not hydrogen sulfide. It was also stated the wind direction could be a factor as well as the Woonsocket treatment plant. The pump station was inspected and no unusual odors were detected around the pump station or in the wet well. The four gas meter did not register hydrogen sulfide. Staff proceeded to the company, Numark. Unusual odors were not detected. Staff met with a representative of the company to determine the frequency of odors. He stated it was not often.
