## 2023 FP Investigations

- 4/6/23 Pretreatment staff responded to a report from a representative of Wings Over Providence, an unpermitted restaurant located at 725 Hope Street in Providence, regarding an oil spill in the parking lot behind the facility. Pretreatment staff met with the owner of the restaurant and conducted an inspection of the kitchen and rear parking lot. There are no catch basins located in the parking lot or adjacent street. The owner indicated an employee spilled waste fryolator oil while carrying a five-gallon bucket to the dumpster. The firm used absorbent pads and sand to absorb and contain the spill. The owner was instructed to sweep up and dispose of the contaminated sand. The owner was informed that the firm may not utilize the solid waste dumpster to dispose of waste fryolator oil in the future. During the inspection, it was noted the automatic grease removal unit (GRU) located in the basement of the facility was not operational. The restaurant was instructed to repair the GRU and retrain its employees on the proper handling and disposal of fryolator oil, grease, and grease laden wastewater. The firm was required to apply for and obtain a Wastewater Discharge Permit.
- 5/23/23 Pretreatment staff assisted RI Department of Environmental Management (DEM) Air staff in conducting a multi-media inspection of Ocean State Metals Inc. located on Delaine Street in Providence. The inspection was conducted in response to several reports DEM received regarding black smoke and fire being emitted from stacks on the roof of the facility. DEM staff requested assistance with this investigation as they believed there could have been discharges to the sewer system via process operations or through the storm water system on the property. Upon arrival at the scene, Pretreatment and DEM staff met with the owner of the facility. He was asked to explain the processes conducted at the facility. It was stated the primary operation is to purchase scrap metal, sort the metal and resell it. It was further stated, a small portion of the business is purchasing jewelry findings, primarily white metal (a tin-lead alloy) castings, melting them and adjusting the ratio of tin to lead. The new alloy is then poured into ingots for sale. The only process wastewater in these operations is non-contact cooling water which is permitted. All appeared to be in conformance with the company's permit. The owner was asked questions regarding the black smoke and flames coming from the stack. He stated that the day of the most recent incident, a load of white metal that was coated with oil was put in one of the melting pots which caused the ignition. The inspection of the parking revealed there are three storm water catch basins. It appears that this storm line discharges to the sewer line on Delaine Street. All three catch basins were inspected. The first catch basin, which is located next to a roll off containing aluminum shavings and farthest away from Delaine Street, appeared to have a tank at the bottom which contained an oily material. The second catch basin was full of solid material. Inlet and outlet pipes were not observed. The inlet and outlet pipes could be seen in the third catch basin. There was liquid in this catch basin. Environmental Monitoring staff was onsite and collected a metals and oil & grease samples. The analytical results of these samples show concentrations of copper, lead and total oil & grease (fats, oils and grease) exceed NBC discharge limits. The company will be required to pump out and clean the storm water system and conduct a dye test to determine where the line discharges. In addition, the company will be required to install spill control measures in the parking lot.
- 8/15/23-8/18/23 Pretreatment staff responded to a report from Interceptor Maintenance (IM) staff stating grease was observed in the sewer lines on Blackstone Boulevard and Hope Street in Providence. Heavy rainfall occurred in early to mid-July causing the sewer lines in this area to surcharge and back-up into numerous homes in the area. In response to the reports of back-ups, IM inspected the sewer lines and observed an accumulation of grease. Pretreatment staff conducted an investigation of the area upstream of the impacted area. It was determined there were 18 facilities with the potential to impact the sewer system with grease laden wastewater. Sixteen of the facilities were permitted at the time of the investigation and the remaining two were not permitted. All 18 facilities were inspected. Twelve of the permitted facilities were in compliance with the terms of their permits as they were properly operating and maintaining their grease removal units and required logbooks. The four remaining permitted facilities were in violation of the terms of their permits. Two of the facilities were maintaining their grease removal units but did not have logbooks available for review. The inspection of one of the other facilities, revealed there was grease accumulated in the grease removal unit and it was not operational. In addition, the facility was not maintaining a logbook. The facility was required

## 2023 FP Investigations

to repair the unit and create a logbook. The grease removal unit at the remaining facility did not have power supplied to it. There was also a pipe coming from the kitchen discharging downstream of the unit. A logbook was not being maintained. The facility was required to repair the grease removal unit, redirect the kitchen pipe to unit and create a logbook. All four facilities were issued Notices of Violation. The two unpermitted facilities had functioning grease removal units. Both were required to apply for and obtain Wastewater Discharge Permits.

11/7/23 Pretreatment staff responded to a report from a store owner on Hope Street in Providence stating the toilet in the facility was not draining properly. The owner had contacted the City of Providence Department of Public Works (DPW). DPW cleaned the lines in the area and advised the business owner to contact the NBC because grease was observed in the sewer line on Hope Street. Pretreatment staff investigated the area and determined there were eight facilities with the potential to impact the sewer system with grease laden wastewater. All eight facilities were permitted. Two of the eight facilities were in full compliance with their permits as the grease removal equipment and logbooks were being maintained. Three of the facilities were maintaining their grease removal equipment but not maintaining logbooks. The remaining three facilities were not maintaining their grease removal equipment and two of these facilities were also not maintaining logbooks. All six non-compliant companies were issued Notices of Violation.

## 2023 BP Investigations

- 3/6/23 Pretreatment staff responded to a report from a representative from Hasbro, Inc., stating there was a spill of glycerine at the 1027 Newport Avenue, Pawtucket facility. The spill occurred when a cooling pump failed releasing approximately 70 gallons of a 30% glycerine solution. A small quantity of the spilled solution discharged to the sewer via a broken spill collar around a floor drain. The treatment plant was not adversely impacted by this spill.
- 5/19/23 Pretreatment staff responded to a report from the City of East Providence stating there was an excessive build-up of grease in a sewer line on North Broadway. An investigation of the impacted area revealed there were three facilities with the potential to discharge grease laden wastewater. Two of the facilities were permitted at the time of the investigation and the third was not permitted. All three were inspected. The inspection of the first permitted revealed the grease removal unit (GRU) was operating properly and being maintained. The owner of this facility stated the GRU is pumped out every two months. It was further stated the facility's lateral had been jetted the prior week. The inspection of the second permitted facility revealed the GRU and logbook were being properly maintained. The inspection of the unpermitted facility revealed there was an automatic GRU installed but was not powered and the wiper blades were worn out. The owner of this facility stated the GRU was being manually cleaned out. The facility was required to repair the GRU and apply for and obtain a Wastewater Discharge Permit.
- 6/27/23 Pretreatment staff responded to a report from Environmental Monitoring (EM) staff stating wastewater from the CBNA Barletta Phase III CSO JV site was observed discharging to a catch basin located on School Street which discharges to the Seekonk River. EM reported that the company was having pumping issues causing the frac tanks to overflow. Upon arrival at the location, Pretreatment staff met with a representative of the company. It was stated more fine material from the mining operation was discharging to the pretreatment system than anticipated. This caused the sand filters to become fouled more quickly. In response, the sand in the filters was being changed out on a monthly basis. This was causing more solid material to accumulate in the frac tanks. The sand filter flow restriction and the higher than anticipated accumulation of solids was causing the frac tanks to overflow to the ground and subsequently to the catch basin. It was further stated that vac trucks were being brought in every two weeks to clean out the frac tanks. The company worked with a vendor to determine the best flocculent to remove the optimal amount of solids including fines out of the water column.
- 7/14/23 Pretreatment staff responded to a report from EM staff stating samples collected from the Blackstone Valley Interceptor (BVI) influent were blue in color. At the time of the report the color of the influent had returned to normal. Pretreatment staff contacted all facilities with the potential to impact the sewer with colored wastewater and required them to submit their color logs. The review of the color logs revealed only one company was processing blue during the time that could impact the treatment plant. The company was not recording the color of the wastewater discharged. The company was issued a Notice of Violation for not recording the color of their wastewater. The treatment plant was not adversely impacted by the colored influent.
- 7/22/23 Pretreatment staff responded to a report from Bucklin Point Operations staff stating the influent entering the plant from both BVI and the East Providence Interceptor (EPI) had a strong odor of fuel. Upon arrival at the plant, Pretreatment staff detected the odor only in EPI. A sheen was not observed in BVI or EPI. Odors were not detected in the Screening Building. The treatment plant was not impacted.
- 11/21/23 Pretreatment staff responded to a report from IM staff stating a large amount of "rags" were accumulated in the regulator upstream of Outfall 101 in Central Falls. An inspection of the sewer line on Samoset Street revealed a build-up of what appeared to be wipes. A second build-up was observed in the sewer line at the corner of Samoset and Crown Streets. A day care was located upstream of the build-ups. Pretreatment staff advised the company to ensure that baby wipes are not discharged to the sewer.

Cd = Cadmium

Cr = Chromium

Cu = Copper

Pb = Lead

Ni = Nickel

Ag = Silver

Zn = Zinc

CN = Cyanide

Hg = Mercury

Mo = Molybdenum

As = Arsenic

Sn = Tin

VOC = Volatile Organic Compounds

Se = Selenium

O&G = Oil and Grease

BOD = Biochemical Oxygen Demand

TSS = Total Suspended Solids

TTO = Total Toxic Organics

TRC = Total Residual Chlorine

TKN = Total Kjeldahl Nitrogen

\*\* No permit limit exists for A-NOEC

LC 50      The effluent concentration that causes 50% mortality during the acute toxicity test duration.

A-NOEC    No observable effect concentration: Highest concentration of the effluent in which 90% or more of the test animals survive.

Acute Test    Continuous exposure to effluent for 48 hours

NC          Not Calculated

C-NOEC    Highest concentration of effluent with no observed effect on fertilization rates.

Chronic test    Tests for sublethal effects of effluent on specifically on fertilization rates of *A. punctulata* eggs. Exposure rate is 60 minutes.
