INVESTIGATIONS***

FIELD'S POINT

2022 Field's Point Investigations

- 4/13/22 Pretreatment staff responded to a report from Interceptor Maintenance staff stating a grease build-up was observed in the sewer line on Ericson Place in Providence. The area upstream of the impacted area was investigated and it was determined there are five permitted facilities in the area with the potential to discharge grease laden wastewater. Four of the five facilities were in compliance with their permits as they were maintaining their grease removal units and logbooks. The grease removal unit in the fifth facility was not operating and was not being maintained. This facility was issued a Notice of Violation.
- 5/20/22 Pretreatment staff responded to reports from Field's Point Operations staff of the influent having an elevated pH. The first report occurred in the morning and the pH was reported at 9.4 standard units (su). Operations staff verified the reading with a handheld meter and the pH was 9.2 su. Pretreatment staff measured the pH of the influent at the grit and the pH was 8.3 su. Staff proceeded to the Ernest Street Pump Station and the pH was 7.4 su and then went to the Washington Park Pump Station where the pH was 7.3 su. At this point the plant was contacted and it was stated the influent pH was beginning to return to normal. In the afternoon, Operations staff measured the pH of the influent was beginning to become elevated. Pretreatment staff measured the pH of the influent at the grit tanks and it was 6.9 su. Staff proceeded to the Ernest Street Pump Station and the pH was in the normal range. Both incidents of elevated pH were of short duration and did not adversely impact the treatment plant.
- 6/8/22 Pretreatment staff responded to a report from the City of Providence Department of Public Works (DPW) stating grease had accumulated in a sewer line on Weybosset Street. The line had been cleaned prior to staff conducting the investigation. Upstream of the impacted area was inspected. There were three permitted facilities in the area with the potential to impact the sewer with grease laden wastewater. Two of the facilities were in violation with the terms of their permits. The grease removal unit in one facility was not operating properly and overflowing due to solidified grease. The grease removal unit in the other facility was not functioning as the timer and wheel assembly had been removed. Neither of these facilities were maintaining the required logbook. Notices of Violation were issued to these two facilities. The remaining facility was in compliance with its permit as it was maintaining the grease removal unit and logbook.
- 7/6/22 Pretreatment staff responded to a report from the Rhode Island Department of Environmental Management (DEM) stating paint was being dumped in a catch basin located at 10 Hospital Street in Providence. Upon arrival at the location, staff observed a white residue covering the catch basin grate. The owner of the building was at the location. It was stated that an apartment on the second floor of the building was in the process of being renovated. The owner had seen the contractor dumping wet plaster in the catch basin earlier in the day. The contractor was instructed to cease dumping in the catch basin and dispose of all waste material properly. The sewer system was not impacted.

- 8/29/22 Pretreatment staff respond to a report from DEM of a hydraulic fluid spill that entered a catch basin at the corner of Alfred Stone Road and Blackstone Boulevard in Providence. It was stated hydraulic lines on a Waste Management truck let go and hydraulic fluid was released on Lafayette Street, Hillside Avenue and Alfred Stone Road. The released material entered two catch basins on the corner of Alfred Stone Road and Blackstone Boulevard. A review of the maps of the area showed the catch basins discharge to a dedicated storm line. Waste Management employed a contractor to apply absorbent material to the roadways. This material was swept up and disposed of properly. When the catch basins were opened it was determined there was oil in the first one and the water level was below the discharge pipe. A Western Oil was contracted to pump out the catch basins. Absorbent booms were placed in the catch basin to prevent any residual oil from discharging to the river during future rain events. The sewer system was not impacted.
- 12/1/22 Pretreatment staff responded to a report of a HAZMAT response at Rhode Island College. The report stated there was a chlorine spill in the pool area of the Recreation Building. Upon arrival it was determined there was not a spill. It was stated a chlorine barrel had begun to expand. Providence Fire Department personnel opened the barrel to relieve the pressure and the barrel returned to normal. No chlorine was released from the barrel and the sewer system was not impacted.
- 12/2/22 Pretreatment staff responded to a report from Interceptor Maintenance staff stating grease had accumulated in the sewer line on George Waterman Road in Johnston. The area upstream of the impacted location was investigated. It was determined there were two potential sources of grease laden wastewater, one was permitted and the other was not. The inspection of the permitted facility showed the grease removal unit was being maintained and operating properly and the required logbook was onsite. The unpermitted restaurant had a passive grease interceptor inside the facility. The restaurant was required to apply for and obtain a Wastewater Discharge Permit and install a NBC approved grease removal unit.

INVESTIGATIONS***

BUCKLIN POINT

2022 Bucklin Point Investigations

- 2/13/22 Pretreatment staff responded to a report from Bucklin Point Operations staff stating there had been a spill of digested sludge. The spill occurred when the seal on the cover of the secondary digester failed, allowing sludge to overflow from the tank onto the ground surrounding the tank. It was stated that there was a blockage in the discharge pipe. The facility had been overwhelmed with wipes which had caused blockages throughout the digestion process. Bucklin Point Operations staff had protected all storm drains in the area, protecting the storm water system at the plant. Therefore, the Seekonk River was not impacted. Operations and Interceptor Maintenance staff worked together to clean up the impacted area.
- 3/15/22 Pretreatment staff responded to a report from Interceptor Maintenance (IM) staff stating foam tripped an alarm in the George Washington Highway pump station in Lincoln. Pretreatment and IM staff tracked the foam upstream and found two potential sources, both hotels. Inspections of the hotels did not reveal the source of the foam as neither was conducting laundry operations at the time.
- 3/10/22 Pretreatment staff responded to a report from Bucklin Point Operations staff stating the influent entering the plant via the Blackstone Valley Interceptor (BVI) was low with a reading of 4.8 standard units (su). Pretreatment staff proceeded to two manholes on upstream of the treatment. The first manhole was located on School Street and the pH in this manhole was 7.4 su. The second manhole was downstream of Bucklin Brook and the pH was 7.24 su. Staff then proceeded to the plant and the pH in BVI was 7.24 su. The low pH influent was of a short duration and did not adversely impact the plant.
- 3/21/22, 3/30/22, and 3/31/22 Pretreatment staff responded to a report from the City of East Providence stating that a manhole located in the parking lot of a shopping plaza located at 1925 Pawtucket Avenue was surcharging due to grease. There is a privately owned sewer line serving the plaza. On March 21, 2022 Pretreatment staff inspected the plaza and observed the remnants of a surcharge. Inspections of Davenport's Restaurant and Stop & Shop located in the plaza were conducted. The grease removal equipment in Stop & Shop was clean and functioning properly. Davenport's outdoor grease interceptor contained a great deal of grease. The manager of the restaurant stated the interceptor had been pumped out three weeks prior. The restaurant was instructed to have the interceptor pumped out again. On March 30, 2022 Pretreatment staff responded once again to the location. At this time, a company was attempting to jet the private sewer line. This was causing a manhole to actively surcharge. The company was instructed to cease this operation and contact a company to pump out the system. Building officials from East Providence shut the water off to the plaza until the situation was corrected. The property management company contacted a company to clean out the sewer lines in the plaza and televise them to see the condition of the pipes. Pretreatment staff conducted another inspection of Davenport's grease interceptor and found it to be in the same condition as the previous week. Once again the restaurant was instructed clean out the interceptor. On March 31, 2022, Pretreatment staff met the company contracted to perform the work and representatives of the City to observe the televising of the pipes. It was determined there was a broken line that needed to be repaired. Davenport's had the grease interceptor pumped out and cleaned. The NBC sewer lines and treatment plant were not impacted.

- 4/15/22 Pretreatment staff responded to two reports from Bucklin Point Operations staff stating the pH of the BVI influent was low. The first report occurred in the morning and the pH was 4.12 su. The second report occurred in the afternoon and the pH was 5.1 su. In response to both reports Pretreatment staff checked the pH in in two manholes upstream of the plant. The first manhole was located on School Street in Pawtucket and the second was located downstream of the Bucklin Brook. During both investigations the pH in both manholes was normal, ranging from 7.8 su to 8.33 su. The pH in BVI had returned to normal by the time staff arrived at the plant during each investigation. Operations staff later reported the low pH was caused by instrumentation issues at the plant.
- 5/12/22 Pretreatment staff responded to report from Environmental Monitoring staff stating that crew was approached by local fisherman during river monitoring. The fisherman stated an oil slick was observed in the Seekonk River. Pretreatment staff arrived at the location and met with the fisherman. It was stated an oil discharge was observed flowing from an outfall located on Taft Street in Pawtucket. They provided a company name and phone number on the outfall was provided. An inspection of the outfall did not show the discharge contained oil. The company name and phone number were forwarded to DEM. The sewer system was not impacted.
- 5/23/22 Pretreatment staff responded to a report from Bucklin Point Operations staff stating the pH of the influent entering the plant from BVI was 8.5 su. Prior to arriving at the plant, staff collected samples from three manholes upstream of the plant. The first manhole located downstream of the Seekonk syphon had a pH of 7.9 su. The second manhole located on School Street in Pawtucket had a pH of 7.66 su. The third manhole located downstream of Bucklin Brook had a pH of 7.43 su. Staff proceeded to the plant and the pH was 7.61 su which was normal. In addition, staff collected a sample from the Moshassuck Valley Interceptor (MVI) upstream of the syphon and the pH was 7.94 su. The high pH incident was of a short duration and did not adversely impact the plant.
- 6/6/22 Pretreatment staff responded to a report from Bucklin Point Operations staff stating the pH of the influent entering the plant from BVI was 5.2 su. Prior to arriving at the plant, staff collected samples from three manholes upstream of the plant. The first manhole located downstream of the Seekonk syphon had a pH of 7.5 su. The second manhole located on School Street in Pawtucket had a pH of 7.25 su. The third manhole located downstream of Bucklin Brook had a pH of 7.15 su. Staff proceeded to the plant and the pH was 7.61 su which was normal. The low pH incident was of a short duration and did not adversely impact the plant.
- 8/18/22 Pretreatment staff responded to a report from a resident on Sheridan Avenue in East Providence of sewer odors. Upon arrival, no unusual odors were detected. Pretreatment staff collected gas meter readings from a manhole on Sheridan Avenue and all readings were within the normal range of the four-gas meter. Pretreatment staff surveyed the surrounding area and could not detect any unusual odors.

8/26/22
through
October
2022

Throughout the months of September and October 2022, the George Washington Highway Pump Station and BVI9 metering station located in Lincoln have been inundated with foam. The foam caused the blower in BVI9 to trip and not function. In addition, on at least two occasions, foam surcharged from a manhole located on George Washington Highway. The Interceptor Maintenance (IM), Pretreatment, Bucklin Point Operations, Environmental Monitoring and Laboratory sections worked together to mitigate this issue. IM installed an ultrasonic meter in the pump station. This meter would detect the level of flow as well as foam in the pump station. The meter would notify IM staff when it sensed the level of foam to be high. At this point IM would notify Pretreatment to investigate. Pretreatment staff would be dispatched to key manholes to collect samples and determine if foam was in the waste stream. Environmental Monitoring was asked to assist in this investigation by installing samplers equipped with 24 bottles in key manholes. The purpose of the individual bottles was to try to observe the samples from the time frame of the notification from the meter. Samples that were collected were brought to the lab where they were looked at under the microscope. This microscopic examination determined the foam was chemical in nature. Bucklin Point Maintenance staff was dispatched to BVI9 when an alarm was tripped showing the pressure differential was off on the blower in the building. Maintenance staff would find the building inundated with foam. They would clear the pressure differential tube and reset the blower. Using a systematic approach, of notification, sample collection and examination, the primary source the foam was determined to be a liquid hand soap manufacturing facility. This facility discharges on an infrequent batch basis. A review of the sewer maps of the area it was determined the flow from this facility takes approximately a half hour to reach the pump station. The company has been required to notify the Pretreatment office when it is discharging. The time of the discharges from the facility correlated with the notifications from the ultrasonic meter of high levels of foam. The company has been required to add defoamer to its wastewater and discharge slowly. Pretreatment staff will continue to work with the company to further minimize the impacts of foam on the pump station and BVI9.

10/5/22

Pretreatment staff responded to a report from Bucklin Point Operations staff stating the pH of the influent entering the plant from BVI was 4.1 su. Staff proceeded to the plant the pH was 4.95 su. Staff collected samples from two manholes upstream of the plant. The first manhole located on School Street in Pawtucket had a pH of 6.7 su. The second manhole located downstream of Bucklin Brook had a pH of 7.4 su. Staff proceeded to the plant and the pH was 6.5 su which was normal. The low pH incident was of a short duration and did not adversely impact the plant.

- 10/27/22 Pretreatment staff responded to a report from Bucklin Point Operations staff stating the pH of the influent entering the plant from BVI was 4.2 su. Staff proceeded to the plant the pH was 6.5 su. Staff collected samples from two manholes upstream of the plant. The first manhole located on School Street in Pawtucket had a pH of 6.7 su. The second manhole located downstream of Bucklin Brook had a pH of 7.2 su. Staff proceeded to the plant and the pH was 7.2 su which was normal. The low pH incident was of a short duration and did not adversely impact the plant.
- 12/2/22 Pretreatment staff responded to a report from Bucklin Point Operations staff stating the influent in BVI appeared to be cloudy. Upon arrival at the plant, the color of the BVI influent had returned to normal. The CBNA CSO Phase III project located on School Street was inspected and all appeared normal. This occurred again on December 5, 2022. Pretreatment, Environmental Monitoring, Operations and Engineering staff worked together to determine the pretreatment system at the CBNA receiving shaft location was not functioning properly. Both of these incidents were of a short duration and did not adversely impact the plant.
- 12/8/22 Pretreatment staff responded to a report from Bucklin Point Operations staff stating the pH in the BVI influent was below 6.0 su. Upon arrival, Pretreatment staff determined the pH in BVI had returned to normal. The low influent pH was a short duration and the treatment plant was not adversely impacted.

** No permit limit exists for A-NOEC

LC 50 LC 50 is the effluent concentration that causes 50% mortality during the acute toxicity test duration.

A-NOEC No observable effect concentration: Highest concentration of the effluent in which 90% or more of the test animals survive

Acute Test Continuous exposure to effluent for 48 hours

* NOTE - % indicates Percent Effluent

** No permit limit exists for A-NOEC

LC 50 The effluent concentration that causes 50% mortality during the acute toxicity test duration.

A-NOEC No observable effect concentration: Highest concentration of the effluent in which 90% or more of the test animals survive.

Acute Test Continuous exposure to effluent for 48 hours

NC Not Calculated

* NOTE - % indicates Percent Effluent

C-NOEC Highest concentration of effluent with no observed effect on fertilization rates.

Chronic test Tests for sublethal effects of effluent on specifically on fertilization rates of *A. punctulata* eggs. Exposure rate is 60 minutes.
